Where:

Luca Osteria
1415 W 22nd Street
Oak Brook, IL 60523

When:

Wednesday, Sept. 21
7-9 p.m.

GROWING YOUR DENTAL PRACTICE THROUGH DIGITAL DENTISTRY

Digital dentistry is changing the way restorative dentists, surgeons, and laboratory technicians interact with one another and plan their treatments. Incorporation of the most up to date CAD/CAM technology for restorative and surgical procedures can help deliver improved outcomes and experiences for patients.

This program will review recent advances in digital technology; the increasing importance of the partnership between the dentist and the lab; contemporary material options used for prosthetic rehabilitation; surgical planning software for implant placement and restoration; and the many benefits available to the treatment team when using digital dentistry solutions.

OBJECTIVES

- Identifying the opportunity gap in the traditional analog dental model
- The rationale to incorporate digital tools and look at our provider identity differently
- Choosing where to “go digital” across the implant rehabilitation treatment timeline

MEET YOUR PRESENTER - DR. ANTHONY PALLOTTO

Dr. Anthony Pallotto is a board certified prosthodontist licensed in Illinois and Indiana with extensive experience in both placing and restoring dental implants. Completing over 1,500 full arch implant restorations, Dr. Pallotto has had the opportunity to contribute to the multidisciplinary care of many complex rehabilitations. His current interests involve emerging digital workflows for full arch dental implant restorations, the utilization of evolving dental materials in order to maximize treatment outcomes, and the revision of surgical and prosthodontic complications. Dr. Pallotto and his wife, who is a general dentist, maintain a multi-specialty private practice originally established by his grandfather in 1946.
